Bibliography of mountain-gazetteers 山志 located in libraries of the People's Republic of China during 1986/87 (with updates until 2003)

1. This bibliography enumerates all mountain gazetteers (MG) 山志 that were on file and available in the libraries of the following institutions: Beijing daxue 北京大學, Nanjing Daxue 南京大學, Sichuan daxue 四川 大學, Zhejiang daxue 浙江大學, 蘇州 and the Beijing shifan daxue 北京 師範大學. Besides these university libraries I checked the catalogue of the National Library of China 北京圖書館 and, in order to compare Chinese holdings with Japanese, the catalogue of the Toyo Bunko 東洋文庫 in Tokyo.

Because of the proximity in content with Timothy Brook’s bibliography on topographical gazetteers it is compiled in English. Thus readers and users of one bibliographical tool can use the other, complementary bibliography without having to learn a new language.

2. The bibliography contains the following data on the MG:
   a) The name of the gazetteer
   b) The author(s) name(s)
   c) Date of printing and reprinting
   d) Name of collection the MG is a part of (if any)
   e) The mainland China library that holds the MG
   f) Reference numbers (if any) to Timothy Brook: “Geographical Sources of Ming-Qing History”, 1st edition, Ann Arbor 1988. Amendations to and corrections of Brook`s descriptive data.
   g) Commentary, remarks

3. Entries are arranged according to the alphabet of the title’s main search words (xin 新 “new” or chong ke 重刻 “re-cut” etc. editions are to be found under the proper name of the MG). Placenames indicating the location of the mountain (-range) with present district, prefecture and province names, not with historical names. The basis for the actual denomination forms the book Cartographic manual of administrative regions in the People`s Republic of China 中華人民共和國行政區劃圖冊, 北京, 地圖出版社 1994).

Boshan also was home to one of the major libraries of Southern China, namely the Jiangsu Provincial Library 江蘇省立國學 TSG, also known by the name Boshan Book-Repository shanshu zang 山書藏. The foundation of this library is formed by the holdings of the Zhejiang scholars and bibliophile Ding Guodian 丁國典 and his grandson 丁丙(1832-1899), the Eight-Thousand Scroll Tower Baqian juan lou 八千卷樓. The books were transfered from the hometown Qiantang 錢塘 to Jiangsu in 1909. For more details see the work 盧抱經先生手校本拾, edited by the 中華叢書委員會 and compiled by Zhao Jishi 趙吉士, Taibei 1958.

I have not seen this work. it might be that the Changbai Mountains of Shandong Province are actually the subject of this work. Yet the catalog of chinese works held in the Library of the Shifan Daxue at Beijing lists the MG together with another MG which definitely describes a place in Liaoning. A "secret map" is also mentioned in this catalogue (as a separate entry also under the category "shan 山") called Changbaijiang Gang Xiang Mi Tu 長白江岡詳秘圖 (1 sheet, drawn by a certain Liu Jianfeng 劉建奉, undated).

This very modern SZ has quite an interesting appeal in terms of its make and content. The 自序 by Wang Jiping already tells quite a bit about the history of this mountain range and about the intentions of the editorial group to tackle the subject (...是我們這一代的光 華任務) of compiling a new gazetteer with a scientific perspective. Besides including chapters on medical herbs (providing the latin reading) there is also a short chapter on the history of mountain worship (ch.7: 山祭).

Dang Shan belongs to 點蒼 Diancang Mountain, with a history of Buddhist activities  
said to date back to the Tang Dynasty. The MG can function as a complementary work to  
the better-known “Chicken-Foot Mountain” MG 雞足山志, also of Dali Prefecture.  
According to the Ming yitong zhi 明一通志, Mt. Diancang was bestowed the title  
“Central Marchmount” 中岳 during Mongol rule (蒙氏封為中岳).

E 12. Brook gives dates of various reprints (p.128). According to this entry the number of Juan should be six. The Toyo Bunka catalogue, however, lists only four plus one additional juan (續卷) for its version of the Hengshan MG (乾集朱墨奎印本). This possibly then is Brook version E 13. A modern, one volume reprint with a well edited, slightly rearranged and now punctuated text was published by the 山西教育出版社, 太原 1986 and again in 1991 (ISBN 7-80578-487-6).

G 11. Numerous reprints. Also listed are earlier MGs of Huashan Brook's date for the Li Shifang MG is given as 1574. As original author a certain magistrate Ma Mingqing is quoted.
There seems to be some confusion about the dates of this MG. The 北大圖 catalogue gives the above stated date, but says it's a reprint 重刊本. The same library also has another reprint (重訂 by 湯武) in 13 juan (8 ce) dating from the Qing (no precise date entered on the filecard). My guess is that the G 11 LC-version is identical with the 北大圖-version, but this assumption lacks final confirmation.

Huoshan zhi 霍山志 6 卷 2 冊 (山西霍縣)  (民國) 沙門 力空 撰 1933 興唐寺鉛印本
Brook mistakenly places this Huoshan in Guangdong province. The Huoshan in question should rather be located in central northern China (exact location see above), since it has the sacrificial appellations 太嶽 and 中鎮, which points to a central position (see 霍山志序 p. 6/7, juan 1: 建置沿革 etc.). There is, though, a Huoshan also in Huizhou/Longchuan district（嘉靖惠州府 志 chap.5: 龍川縣 p.32a-33b), but it neither has the size nor the appropriate topography to match a “central garrison mountain” (中鎮山). The toponym Huoshan, I agree, poses a problem to the researcher of historical geography. The most common misunderstanding is to take Tianzhu Shan 天柱山 in Anhui province for the Huoshan of the SZ by Li Kong. Mt. Tianzhu, also called Huoshan or Wan Shan 皖山, indeed seems at one point to have fulfilled the functions of “state protective” mountain, and quite a few of the related prayer texts for this Tianzhu Shan are actually entitled 祭霍山議 or the like. Even more confusing is the fact that one of the “五嶽”, namely 衡山, was also called Huoshan at one point and sacrificed to under this name (see the new 1984 天柱山志 version – Brook: C 6 – introduction 列言 p. 3. see also the article 衡霍辨 by 光明甫 in 史學工作通訊 1957/1 期, p. 8-15), a fact that transfers most of the “official” mountains on the plane of the so-called “drifting mountains” (浮山): they only temporarily can be fixed in time and space, otherwise there names (and the attributes attached to the name) travel throughout the empire.

Regarding Brook O38, which is also a Huoshan MG, I have not found any evidence that it could represent an older version of O 39 (describing the same place). The Toyo Bunko catalogue also groups Li Kong`s MG together with other Guangdong MG`s (p. 365), including O38, the placing of which might be correct, although I have no way of confirming this notion at present.

This MG, according to the foreword, was compiled under the guidelines of Marxism and the thought of the great leader Mao Zedong, employing strict methods of dialectic materialism, always remembering that the past has to serve the present. By this way not only does the reader know more about Mt. Jigong, but, rather, the level of selfrespect and self confidence of the people has been raised in order to prepare for nationalism and the fervent construction of socialism (foreword, p.1 bottom).

The MG compiled by Zhang interestingly contains an “original foreword” (原敘) dated 萬曆乙酉= 1585, which might have been taken from the Ming-version that – according to Brook p. 138 – was published in 1589.

The name Kuang Mountain should not be confused with the alternative name for Lushan in Jiangxi which uses the same character kuang.

Richard Wilhelm used material from this gazetteer (especially chap. 3: 名勝) for his short, but illuminating monograph on the Laoshan: `Der Lauschchan nach chinesischen Quellen`. Tsingtau 1913, 45 p. In the course of reading this translation (which possibly was only a `practice run` for Wilhelm's later, more ambitious translation projects) one cannot help the feeling that old Huang Zongchang, the original author of the text, simply uses the landscape and the attributes extracted from it as a
stage to air his views on morality and proper conduct to an audience he otherwise was
(as a retired censor living in the mountain) not able to reach.

nephew of An Guo 安國) holding the post of secretary general of the ministry of rites

about a Shandong region is not clear (see 明史卷 231-列傳 119 for a short ount of his
life. see also Dictionary of Ming-Biography by Goodrich/Fang, 1976, p.11-12). His
wealthy uncle An Guo, however, and indeed the whole family, after moving away from
Henan province “settled in Hou-tsun 埠村, at the foot of Chiao-shan 膠山 Wusih 無錫”

There are scores of “Numinous Cliffs” in China (see below). Some of them have their own gazetteer. Brook groups this Ling Yan together with other mountains in Shandong, near Jinan 濟南. The geographical dictionaries that I checked do not support this setting. Rather, they carry information on likewise called cliffs in Guangxi, Jiangsu, Zhejiang and Anhui. According to the 讀史方輿紀要 Chap. 31 (under the heading 長清縣), however, a certain 方山 (Square Mountain) is listed which is situated about 90 li southeast of the county seat. Original name of the mountain as given in the Shanshui jing is 玉符山. On the northern side of this mountain a temple called Lingyan Si 寺 is situated which dates back to the Tang. Two sentences further on, though, the text states that the Lingyan si is situated at the mouth (the pass?) of the Western Mountain (靈巖寺西山口也). Although rather confusing (we have one temple on two mountains? in the same county) it might well be that this gazetteer is actually a monastic gazetteer, implying that it should be located in Shandong, and not be grouped together with “real” 嶽志 of the 江南 region.

Juan 5 includes inscriptions, inquiries into historical relics, temple regulations. Juan 6 lists “contracts” 契據, 捐約 (probably between the temple and local land tenants, or between the temple and relatives of deceased persons on grave plots. a third possibility would be that these contracts were written for ritual purposes and constitute agreements between the priesthood and the gods). Juan 7 contains information on the so-called “city and regional taxes” 城捐, 鄉捐. I 8. Brook has somewhat different bibliographical data: the LC-version listed dates to the year 1661. second, the name of the author corresponds to the name of the
compiler I quote above. The name Sang Qiao, on the other hand, is according to
Brook’s entry # I6 the name of the author of the Lushan Jishi 廬山紀事 (also 12 卷!) which dates back to 1561. Thus it might be the case that I6 and I8 are actually the
same text (Brook- I8: “Relies heavily on I6.”) with very few alterations. The –jishi
version is held by the 北師圖 as part of the 資章 CS, with additions by Fan Reng 范祿.

I 9. Brook has for date of printing 1719, which would differ greatly from the above
cited date of compilation. 1873 reprint and 1793 emended version are correct dates,
though. Brook has many more reprints(1910, 1915). Interesting and possibly halfway
explaining the time gap between the compilation of the text (1668) and its alleged
printing (1719) is Brook’s statement (p. 146) that this MG “is based in part on a
1668 Lushan zhi 廬山志 compiled by Wu Wei 吳煒, already rare in Mao’s time and now
apparently no longer extant.”
This would mean that Mao actually lived (maybe half a century?) later than this
certain Wu Wei, implying that the 北圖 file card does not distinguish between the
original compiler and the later editing work by Mao Deqi. The date given points to Wu
Wei’s MG, though, while the law of probality speaks against it.

O 31. Brook gives no. of juan as 2 and adds a 會圖 to the title. This corresponds to Soymie’s entry on p. 129, but not to my 南圖 filecard entry.
The readings of Brook/Soymie I take to be the correct ones. Brook varies with the year of printing by dating the work to 1717.

Luofushan fengwu zhi 羅浮山風物志 （廣東省博羅縣）
謝華 編著
1984
廣東旅游出版社
138 p.
A brief, new style booklet intended for tourists. Besides narrating stories it does in fact contain quite a high number of entries for scenic sites, buildings, the local 洞天 and many other spots on the mountain. Though produced in a popular and rather simplistic manner, the editors actually fear that this book is not easy to understand （對於一般讀者來說）不好懂. Foreword by 黃雨 p.2）It does in fact transpire that a mountain such as Luofu cannot be put in a nutshell, no matter how simple the approach and how (un-)educated the audience may be.

The filecard that I copied actually carries the characters for reprint in parenthesis behind the original title of the work (重刊). This points to an earlier work, an assumption that is confirmed by Brook (p. 151) who states that this Qing-version is “based on an earlier work by Luo Sen 羅森”.

Maoshan zhi Jiyao 茅山志輯要 1 卷 (江蘇省句容縣)
(民國) 江導岷 輯，(民國) 滕瑞芝 編 (pruefen)

Includes six folding charts and various forewords by Da Changuang (dated 1669) and Xu Zishen (徐子慎 - dated ca. 1824). This abridged version of the otherwise quite lengthy Moashan gazetteers also contains a “General Table of Contents of the Original Gazetteer” 原志總目 as the concluding (of seven) sections.
We have a name of a site belonging to a certain county at a given time, and possibly to another county in the following centuries. The texts concerning this same site are then distributed over various chronicles and difang zhi, which might be difficult to identify.

Compare Hong (1984) entry #14.159 for bibliographic reference and more details on Nantian Shan.

Hong lists numerous other Nan Yandang gazetteers, all of them lost except the 2 juan work of 1547 by Chen Wen 陳文 (entry 14.135) which according to the 溫州文獻述概 is held by some library in Japan (Brook unfortunately has no data on this early version). Mt. Yandang has been bestowed with over 30 shan zhi (see Hong 1984 entry 14.112 to 14.141).

No precise date given. Contained in the 知服齋叢書.
Although this little work is not a proper gazetteer it still attains a standard of information that satisfies historical and geographical curiosity. As a work of the Tang it therefore is important as a predecessor of such works like the Jinhua Shan zhi (a work that already uses categories to enumerate caves and stones or people etc.) of the Song.

K 18.
The Nanyue Zongsheng Ji is probably the most elaborate and best organized pre-Ming 山志 we have (it easily surpasses the Wangwushan zhi 王屋山志 of the Ming in scope and density of data). The three chapters are arranged according to the following categories:
Chap. 1 describes the peaks, the dongtian 洞天, the fudi 福地, waterfalls and streams, the six gates, 15 other caverns, the 23 altars, the 38 cliffs, nine ponds and 25 springs, 14 pagodas and 16 terraces, 8 halls and the ancestral temple of the mountain (god) 嶽祠.
Chap. 2 contains descriptions of the monasteries and temples 寺觀, gives the texts of stele inscriptions 碑文 and informs about the local flora and fauna.
Chap. 3 finally is devoted to the lives of priests (both daoist and buddhist) and “strange people that have attained the Dao during the Tang and Song 敘唐宋得道異人高僧.”

K 19. Brook has 重修 as prefix to the original title of the work and notes a reprint of 1924. Other reprint of 1985. The reprint of 1985 () also contains 增補 and 續 (2 juan respectively).
K 20 notes an independent work called 續增南嶽志 in 2 juan. Altogether there should be 4 juan, because we first have two 卷 of additional 文集 labelled as 續增. Secondly there is another amendment to the addition called 增補, which counts for another 2 juan. This arrangement obviously dates back to the year 1924. The author of these amendments is a certain Wang Xiangyu 王香余.
All of the titles listed above (e.g. the 南嶽志 plus 續增... plus 增補...) were again jointly reprinted in 1990 as part of the 海王古籍叢刊 by the 中國書店 in Beijing (ISBN 7-80568-172-4. this edition only comprised 500 copies).

This gazetteer is merely a collection of poems and other literary writings. There is not much information on the history of the temples and cloisters that litter the mountain, or on important people, plants or animals and the like. Considering the fact that Mt. Qingcheng was (and, on a smaller scale, still is) one of the most important daoist mountains in China this 1895 gazetteer is a far cry from shan zhi compilations attributed to other (and lesser) mountains. I cannot help speculating
that at one point there must have existed a more detailed gazetteer dedicated to Mt. Qingcheng. There were already a great number of texts concerning Mt. "Green-City" during the Tang-dynasty (ritual texts by Du Guangting for example, see the 全唐文 932, 934, 936 and 938/9).

It would have been natural for a Song- or Ming dynasty compiler to gather these texts and complete the work with descriptive data on the numerous monasteries, temples and shrines of the mountain (there is also a 后青城山 that stretches way back towards the Min mountain range 岷山). So far this (assumed) work has not surfaced. Also conspicuously absent are historical monographs devoted to other famous sites of Guan county: 都江堰 and the famous Erwang miao 二王廟 for example.

This gazetteer lacks the 2nd juan. Otherwise it is one of the most interesting MG of daoist provenance. It is only concerned with daoist matter: the main monastery up on Mt. Qionglong is a socalled Gou Qu Xinggong 句曲 行宮, which means it is an edifice linked to the “mother-temple” on Mt. Gouqu (i.e. Maoshan). Unfortunately the clear and organized table of contents which precedes the text itself stands in sharp contrast to the very confusing arrangement of the compiled writings. Chap. 3 for example is again introduced by various forewords beginning of the work. The same with chapter four. It appears as if these chapters once formed independent groups of texts and that they were later merged without caring about the formal rules of the genre. Highly interesting texts that are contained in this rare gazetteer (I have not found any reference to it anywhere else besides the old Harvard/Yenching Library – i.e. now Beijing Daxue Tushuguan) are those concerning the Three Brothers Mao (三茅真君), instructions for rituals (靈寶 宗旨, 書符, 罡訣, 分燈制器, 破獄, 煉度 etc.) and a day-by-day calendar about the forces that prolong life (all in chapt. 3). It is obvious from the above quoted titles that Mt. Qionglong must have been a very active center of Zhengyi 正一教 Daoism at one point of time. Today it does not appear on any religious map any more (for instance it is not listed on the map drawn by Judith

There is a curious spelling coincidence between the Song Siren 宋思仁 who edited the

to the character -si- 思, might have been confused by Brook, which would mean that
both works should be attributed to the same person (as editor/ compiler), namely Song
Siren 宋思仁. The Toyo Bunka catalogue, however, quotes the name Song Ruhe 宋汝和 as

北大圖 (has 1943 version), 北師圖 (holds original of 1938)
A modern gazetteer that contains a wealth of highly interesting materials on this
little-known north-western daoist mountain (Longmen-branch since the Ming dynasty).
Included are stele inscriptions, monastic regulations, prayers, genealogies of monks,
priests and abbots, local products and land holdings etc. The section on poems and
travellogues is very small in comparison to real daoist writing. Many individual
texts compiled here are preceded by the “Anweisung” (directive) to learn them (by
heart: 玄門必讀). For that reason I think that the Tiecha gazetteer actually might
have been used as training and teaching material for the local novices.

D 6. Brook: “Gazetteer of the Daoist monastery Dongzhen Guan 洞真觀, known as Longshou Gong 隆壽宮 in the Ming.”
His spelling of the name is doubtless faulty: Liu Tong 劉侗 should actually be Li Tong as quoted above (after the 中國叢書綜錄 vol.3, p.572). Even the Toyo Bunka-catalogue of 1986 gives the name as Li Dong 李洞, which I take to be incorrect, too.

Not exactly a MG, this classical work comprises only eight leaves 頁 and deals with
mountain names and other topographical features of the Lake Tai 太湖 region. It was
joined and printed together with the Wuxing Ji 吳興記 by Shan Lian zhi 山迢之 (also
of the Jin-dynasty) which in addition lists caves. For investigating mountain
gazetteers these two works form important background material on the history of the
genre.
The 中國叢書綜錄 (vol.2, p.540) substitutes the middle character of the author`s name
for xuan 玄, dates him to the Liu Song 劉宋 and lists his work together with the
Wuxing Ji in the collection 范聲山雜錄.

O 14. Brook lists a manuscript copy of UBC dated 1503, i.e. earlier than the Shanghai TSG version. According to the work 稀見地方志提要 by Chen Guangyi 陳光貽 (齊魯書社, 濟南 1987, vol. 2, p. 865) the Yashan zhi in question was compiled by Huang Chun in 1611 (明萬曆三十九年修). Two years earlier – in 1609 – Huang had just completed editing the local gazetteer of Xinhui county. For these reasons I have difficulties epting the date for the UBC version, since Huang Chun obviously lived around the turn of the 16th to the 17th century, thus a work dated 1503 cannot be attributed to him.

This work basically is a text written with the intention on mapping out the strategical infrastructure of the border terrain in this region of China.

Recent reprints (1978 and 1983) Taipei, Taiwan (ZC).

Brook quotes 1937 as date of printing for the Shifan-version, while the new Shifan-Catalogue of 1983 gives the above-cited date (道光 16 年).

Bibliographic references see also Hong (1984) entry 14.30 and for lost amendments entries 14.31/32.

According to the 浙江地名简志(杭州 1988, p.135) this Mt. Zhaobao is 81.7 m high. Originally there were two peaks (大/小招寶山) but the small peak was blasted away when the harbour was enlarged in 1974. In 1984 a Tibetan rock inscription was discovered on the mountain that was not cited in the gazetteer or the Zhenhai Xian zhi 鎮海縣志. The hill used to be a Buddhist retreat, but already in 1560 a wall was built to encircle the peak and protect defensive equipments and the populace itself. In the Guangxu era (1877, 1884 and 1887) the mountain was used as a strategic spot to construct canon platforms.
During the French-Chinese war these platforms were used against French boats and it was here where the French admiral Amadé Anatole Prosper Courbet (1827-1885) received his mortal wound of which he died in June 1885 – an event that "shook the foreign powers" (擊斃法帥孤拔，威震中外).

A thorough description of this site, which – as reflected in the SZ treated here – appears to be a petrified swiss cheese (72 caves are exclusively treated in the tu zhi) – can be found in Boerschmann’s work on "Baukunst und Religiöse Kultur der Chinesen", vol.2: “Gedächtnistempel”, Berlin, Reimer Verl. 1914, p. 95-153.
